

**MEDIDENT**

# **AI SEARCH + SEO + GOOGLE ADS SYSTEM BRIEF**

Dental Health Tourism | Istanbul | Multilingual International Patients

Prepared as a practical reference for the Cursor SEO automation and Google Ads launch.

Date: 23 September 2026

## 1. Executive summary

The objective is not to publish hundreds of generic articles. The objective is to make MediDent easy for search engines and AI search systems to understand, cite and connect to real patient intent. Google states that its AI Overviews and AI Mode still rely on core Search systems and that the same foundational SEO practices remain relevant. Bing similarly states that the same crawl/index/ranking foundations support grounding and citations in Copilot and AI experiences. A dedicated Germany Turkish-speaking diaspora segment is included, based on MediDent's first-party patient history.

| Area             | System decision                                                                                                                                                                                                          |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AI search        | Use natural-language patient prompts as an intent/regression dataset, not as 90 separate articles.                                                                                                                       |
| SEO architecture | Build treatment, country/language, doctor, clinic, patient-case, travel and aftercare entities with strong internal links.                                                                                               |
| Content          | Prioritize unique factual evidence, clear answers, patient journeys and verified details over word count and keyword density.                                                                                            |
| Google Ads       | Start with high-intent Search campaigns, separated by country/language and treatment intent. Map each ad group to a matching landing page.                                                                               |
| Measurement      | Track form, WhatsApp and calls, then import qualified/converted lead stages back to Google Ads using GCLID and/or enhanced conversions for leads where appropriate.                                                      |
| Compliance       | International healthcare promotion from Türkiye is subject to the 12 Nov 2025 regulation and Google Ads healthcare/personalized advertising policies. Build compliance checks into the publishing and campaign workflow. |

**Key principle:** Cursor should behave like a knowledge-base architect and SEO quality-control system, not like an article factory.

## 2. What this research does and does not claim

- We cannot access private ChatGPT user logs or a hidden global count of who asked what. The 110 prompts in this document are natural-language intent examples for system design and testing, not a disclosure of private user conversations.
- Exact Google Ads monthly search volume and CPC are account/market-dependent. Google recommends Keyword Planner for current search volume and forecast data; its forecasts are refreshed from recent market data. This document therefore treats keyword lists as strategic seeds and public third-party benchmarks as directional only.
- For live budgeting, export Google Ads Keyword Planner results for each country + language + keyword set and replace the directional figures with your account-specific numbers.

### 3. AI / ChatGPT dental-tourism prompt dataset

Use these prompts as a regression library. Group semantically equivalent prompts into intent clusters and ensure the website contains explicit, factual passages capable of answering them.

#### UK - English

01. Can you find me a reputable dental clinic in Turkey for implants?
02. I'm from the UK and I want to get my teeth done in Turkey. Where should I start?
03. Can you compare some dental clinics in Istanbul for British patients?

02. Jeg bor i Danmark og har brug for tandimplantater. Hvilke klinikker i Istanbul boer jeg undersoege?
03. Hvordan vurderer jeg, om en tandklinik i Tyrkiet er serioes?

### 3A. Germany Turkish-speaking diaspora - separate intent segment

This segment was not represented strongly enough in the original prompt set. Based on MediDent's first-party history of receiving many patients from Germany, especially Turkish-speaking people living in Germany, it should be treated as a dedicated search-intent layer rather than being hidden inside the generic Germany/Deutsch cluster.

Important: "Gurbetçi" is an internal segment label, not necessarily the exact phrase users type. The automation should model the underlying intent: a Turkish-speaking person living in Germany who wants dental treatment in Turkey and may prefer Turkish communication.

#### Typical natural-language prompts - Turkish-speaking Germany residents

01. "Almanya'da yaşıyorum, dişlerimi Türkiye'de yaptırmak istiyorum. Güvenilir bir klinik bulur musun?"
02. "Almanya'dan Türkiye'ye diş tedavisi için geleceğim. İstanbul'da iyi bir klinik araştırır mısın?"
03. "Almanya'da implant çok pahalı. Türkiye'de implant yaptırmak için hangi kliniklere bakmalıyım?"
04. "Almanya'dan gelen hastalarla çalışan İstanbul diş klinikleri hangileri?"
05. "Türkçe konuşuyorum ve Almanya'da yaşıyorum. Türkiye'de diş tedavisi için bir klinik bulabilir misin?"
06. "Almanya'dan diş yaptırmaya Türkiye'ye geleceğim. Tedavi süreci nasıl oluyor?"
07. "Almanya'daki diş doktorumun verdiği fiyatla Türkiye'deki fiyatı karşılaştırabilir misin?"
08. "Almanya'dan İstanbul'a diş için kaç gün gelmem gerekir?"
09. "Diş implantı için Almanya'dan Türkiye'ye gelmek istiyorum. Hangi klinikler yabancı hastaları kabul ediyor?"
10. "Dişlerimin fotoğraflarını göndersem Türkiye'de hangi tedavilere ihtiyacım olabileceğini anlatıp klinik araştırır mısın?"
11. "Almanya'dan Türkiye'ye gelip zirkonyum yaptırmak istiyorum. Güvenilir klinikleri karşılaştırır mısın?"
12. "İstanbul'da Almanya'da yaşayan Türk hastalarla çalışan diş klinikleri arıyorum."
13. "Almanya'dan gelen hastalara havaalanı transferi ve otel konusunda yardımcı olan diş klinikleri var mı?"
14. "Türkiye'de diş yaptırdı Almanya'ya döndükten sonra sorun olursa klinik nasıl destek veriyor?"
15. "Almanya'daki Türkler diş tedavisi için İstanbul'da hangi klinikleri araştırıyor?"
16. "Almanya'dan Türkiye'ye diş tedavisine gelmeden önce kliniğe hangi belgeleri ve röntgenleri göndermeliyim?"
17. "Almanya'dan Türkiye'ye komple ağız tedavisi için gelmek istiyorum. Süreci benim için anlatır mısın?"
18. "Türkçe iletişim kurabileceğim ve Almanya'dan hasta kabul eden bir diş kliniği arıyorum."
19. "Almanya'da yaşayan biri olarak Türkiye'de diş tedavisi yaptırırken nelere dikkat etmeliyim?"
20. "Almanya'dan gelen bir hasta için İstanbul'da diş tedavisi araştırırken hangi klinik bilgilerini kontrol etmeliyim?"

#### Germany-diaspora SEO intent clusters

Country + journey: Almanya'dan Türkiye'de diş yaptırmak; Deutschland -> Türkiye dental journey; Germany patient journey

Turkish language: Almanya'da yaşayan Türkler; Türkçe konuşan Almanya hastaları; Almanya'dan Türkçe diş kliniği

Treatment: Almanya'dan implant; Almanya'dan zirkonyum; Almanya'dan All-on-4; Almanya'dan komple ağız tedavisi

Comparison: Almanya Türkiye diş fiyatı karşılaştırma; implant fiyatı Almanya vs Türkiye; treatment quote comparison

Trust: Almanya'dan gelen hastalar; güvenilir klinik; doktor; hasta yorumları; gerçek vaka

Travel: Almanya'dan İstanbul'a dış; kaç gün; havaalanı transferi; otel; ziyaret sayısı

Aftercare: Türkiye'de dış yaptırap Almanya'ya dönünce; kontrol; iletişim; takip

## Recommended Germany architecture

Do not create a thin “gurbetçi” blog post. Use a durable Germany patient page plus a Turkish-language Germany page if the business can genuinely support Turkish communication. Keep German and Turkish intent distinct in hreflang and page copy. The Turkish page should answer the practical questions of people physically living in Germany, not people located in Turkey.

Suggested URLs: /patients/germany/ (German) and /tr/almanya-dan-turkiye-de-dis-tedavisi/ (Turkish). Use the second URL only if the Turkish-language international-patient workflow is real and the page is genuinely useful.

## Google Ads - Germany Turkish-language campaign

Treat this as a separate campaign: Germany location + Turkish-language creative/landing page + Search intent. Do not mix it into the generic Germany/German campaign because the ad copy, landing page, CRM routing and follow-up language are different.

### Keyword seed set - validate in Google Ads Keyword Planner

- Almanya dış tedavisi Türkiye
- Almanya dış kliniği Türkiye
- Almanya'dan Türkiye'de dış yaptırmak
- Almanya'dan dış yaptırmak
- Almanya implant Türkiye
- Almanya'dan implant yaptırmak
- Almanya Türkiye dış implant fiyatları
- Almanya Türkiye dış fiyatları
- Almanya'dan İstanbul dış kliniği
- Almanya'dan dış kliniği İstanbul
- Almanya'dan zirkonyum Türkiye
- Almanya'dan All-on-4 Türkiye
- Almanya'da yaşayanlar Türkiye'de dış yaptırmak
- Almanya'daki Türklere dış kliniği Türkiye
- Türkçe konuşan dış kliniği İstanbul Almanya
- almanya türk dış kliniği istanbul
- dış yaptırmak için Almanya'dan Türkiye'ye
- almanya dişçi türkiye

- almanya implant fiyatı türkiye
- almanya zirkonyum fiyatı türkiye

Google Ads rule for this segment: the keyword list above is a seed set, not claimed search-volume data. Validate exact demand, CPC and competition in Google Ads Keyword Planner for Germany + Turkish before budget allocation. Preserve actual search terms from the campaign and feed qualified winners back into the SEO intent library.

## Germany Turkish diaspora - landing page content requirements

- The page should explicitly state that it serves international patients living in Germany, and if true, that Turkish-language communication is available.
- Explain how a remote pre-assessment works, what photos/X-rays can be sent before travel, and what must wait for an in-person clinical examination.
- Explain the trip workflow: first contact -> information / imaging review -> treatment plan -> appointment scheduling -> travel -> clinic visits -> return home -> aftercare communication.
- Explain the number of visits and treatment duration only when verified for the relevant procedure.
- Explain aftercare and communication after returning to Germany without promising unlimited or legally undefined support.
- Use real German/Turkish patient cases only with documented consent and accurate facts.
- Keep current prices separate from historical examples and label currency/date clearly.
- Include exact language support: Turkish, German, English, etc., only if actually offered.

## 4. Intent clustering: do not turn 110 prompts into 110 URLs

| Cluster                 | Examples                                                                | Primary URL type                                    |
|-------------------------|-------------------------------------------------------------------------|-----------------------------------------------------|
| Treatment - high intent | dental implants Turkey; implants in Istanbul; full-mouth reconstruction | Treatment page                                      |
| Price / cost            | implant cost; all-on-4 price; veneers price                             | Treatment pricing section / dedicated pricing guide |
| Trust                   | reputable; reliable; serious clinic; experience                         | Trust / clinic / doctor evidence pages              |
| Country journey         | German patients; UK patients; French-speaking patients                  | Country-language landing pages                      |
| Comparison              | compare clinics; compare quotes                                         | Comparison / treatment guide                        |
| Clinical planning       | photos; X-rays; what treatment do I need?                               | Consultation + treatment-planning page              |
| Travel logistics        | hotel; airport; how many days; visits                                   | International patient / travel page                 |
| Aftercare               | follow-up after returning home                                          | Aftercare page                                      |
| Patient cases           | real patient journey; country; treatment; timeline                      | Case-study pages                                    |
| Brand                   | MediDent / clinic name queries                                          | Brand campaign + brand page                         |

## Recommended URL architecture

/treatments/dental-implants-turkey/  
 /treatments/all-on-4-turkey/  
 /treatments/veneers-turkey/  
 /treatments/zirconia-crowns-turkey/  
 /patients/germany/  
 /patients/uk/  
 /patients/france/  
 /patients/netherlands/  
 /doctors/<doctor>/  
 /clinic/istanbul/

/patient-cases/<case>/  
/travel/  
/aftercare/

## 5. Cursor SEO automation - master operating prompt

The following block is intended to be copied into the master/system layer of the SEO automation. It deliberately prioritizes factual entity coverage and quality control over mass publishing.

You are the SEO and content architecture engine for MediDent, an international dental treatment coordination business based in Istanbul, Turkey.

Your job is NOT to mass-produce generic SEO articles.

Your job is to build a trustworthy, structured, multilingual knowledge base that can be understood by search engines and AI-powered search systems.

### CORE PRINCIPLES

- Optimize for user intent, entity clarity, factual accuracy, medical trust, first-party evidence, crawlability, structured information, internal linking and multilingual relevance.
- Do not optimize primarily for keyword density, article length or URL count.
- Every URL must have a clear reason to exist.

### QUERY PROCESS

1. Classify each target query by country, language, treatment, location, funnel stage, trust concern, price concern, travel concern, aftercare concern, comparison intent and clinical-information intent.
2. Cluster semantically equivalent queries.
3. Before creating a new URL, check whether an existing URL already satisfies the intent.
4. Reject duplicate country/city pages that only swap place names.

### MEDICAL FACTUALITY

- Never invent doctors, qualifications, licenses, accreditations, reviews, patient counts, prices, treatment outcomes, guarantees, brands, materials, timelines or patient stories.
- Never diagnose from a photo or description.
- Use clear uncertainty language and refer clinical decisions to the treating dentist.
- Important medical claims need a source or clear attribution to the treating clinician.

### AI-CITABLE PAGE STRUCTURE

Every important page should make the following explicit where applicable:

- Direct answer / summary
- Definition
- Suitability / assessment considerations
- Treatment process
- Number of visits
- Duration
- Pricing or pricing method
- What is included / excluded
- Risks and limitations
- Doctor information
- Clinic information
- International patient process
- Language support
- Travel information
- Aftercare
- Real patient cases where genuinely available
- FAQs
- Contact / consultation CTA

### AT-A-GLANCE DATA

Treatment | Location | Languages | Consultation method | Duration | Visits | Price method | Included items | Travel support | Aftercare | Last reviewed

Only populate verified facts.

### COUNTRY PAGES

Country/language pages must contain genuinely localized information about the patient's journey from that country. Do not merely translate the same text.

### ENTITY GRAPH

Keep exact, approved names and facts for MediDent, clinic, doctors, treatments, materials and languages.

Link Organization -> Clinic -> Doctor -> Treatment -> Country -> Patient Case -> Travel -> Aftercare.

#### STRUCTURED DATA

Use only schema types that accurately represent visible page content. Consider Organization, LocalBusiness or appropriate specific subtype, Person, Article/BlogPosting and BreadcrumbList. Never fabricate review markup.

#### AUTHOR / REVIEW

For medical informational content, show real author/reviewer identity where applicable, plus publication and last-reviewed/modified dates.

Never fabricate a medical reviewer.

#### FAQS

Generate FAQs from real user-intent questions. Do not create FAQs merely to insert keywords.

#### SEO QA

Check: intent match, originality, factual verification, medical accuracy, entity consistency, duplicate content, cannibalization, internal links, schema accuracy, canonical, hreflang, robots/indexability, sitemap, mobile rendering, speed, image alt text, authorship, last-modified date.

#### PUBLISHING PRINCIPLE

More relevant facts + more unique evidence + more entity clarity + more user-intent coverage + more trust.

Less duplication + less AI filler.

#### AI SEARCH REGRESSION

Maintain a natural-language query library. After publishing, test whether the page contains explicit factual passages capable of answering target prompts. Track query coverage, entity coverage, citation-ready passages, missing evidence and outdated information.

DO NOT publish a page if you cannot answer: "What question can this URL answer better than any other URL on the site?"

## 6. Page blueprint for MediDent

| Block                 | What Cursor should generate/check                                             | Evidence requirement                           |
|-----------------------|-------------------------------------------------------------------------------|------------------------------------------------|
| H1 / answer           | Clear treatment + destination + audience when relevant                        | No exaggeration                                |
| At a glance           | Treatment, location, language, visits, duration, price method, aftercare      | Verified data only                             |
| Treatment explanation | What the procedure is and why assessment matters                              | Clinical source/doctor attribution when needed |
| Patient process       | Remote pre-assessment -> travel -> clinic -> treatment -> return -> aftercare | Operational facts                              |
| Doctor                | Qualification, role, areas, real profile                                      | Real credentials                               |
| Clinic                | Location, facility, official identity, contact                                | Official clinic info                           |
| Materials             | Brands/materials actually offered                                             | Product/clinic evidence                        |
| Case studies          | Real patient, timeline, treatment, images, consent                            | First-party evidence + consent                 |
| FAQ                   | Natural questions from prompt library                                         | Factual answers                                |
| CTA                   | Request assessment / contact                                                  | Do not imply guaranteed outcome                |

### AI-friendly does not mean "AI-looking"

- Write natural, human-facing text. Avoid repeated keyword strings and artificial phrasing.
- Keep important facts in visible text rather than only images or sliders.
- Use concise sections, descriptive headings, tables where helpful and explicit dates for changing information.
- Use high-quality original images, but never let images be the only location of essential facts.

## 7. Google Ads keyword research - strategy

Google Ads should be treated differently from SEO. Search campaigns should capture existing high-intent demand rather than attempting to rank for every informational query. The initial system should be country + language + treatment aligned.

### Keyword tiers

| Tier | Intent                 | Examples                                                                      | Use                                         |
|------|------------------------|-------------------------------------------------------------------------------|---------------------------------------------|
| A    | Very high intent       | dental implants turkey; dental implants turkey cost; dental implants istanbul | Primary Search                              |
| B    | High intent            | all on 4 turkey; full mouth implants turkey; veneers turkey price             | Primary Search                              |
| C    | Provider / destination | dental clinic turkey; dentist istanbul; dental clinic istanbul                | Secondary ad groups                         |
| D    | Comparison / research  | best dental clinic turkey; dental treatment turkey reviews                    | Small test group or content feeder          |
| E    | Broad informational    | how long do implants last; implant recovery                                   | Usually SEO, not first paid-search priority |

### UK/EN - Core

| Keyword                  |                             |                                   |
|--------------------------|-----------------------------|-----------------------------------|
| dental implants turkey   | dental implants turkey cost | dental implant turkey price       |
| dental implants istanbul | dental clinic turkey        | dental clinic istanbul            |
| dentist turkey           | dentist istanbul            | full mouth dental implants turkey |
| all on 4 turkey          | all on 4 turkey cost        | veneers turkey                    |
| veneers turkey price     | dental crowns turkey        | zirconia crowns turkey            |
| hollywood smile turkey   | dental tourism turkey       | turkey teeth                      |

### DE/DE - Core

| Keyword                          |                              |                                   |

### NL/NL - Core

| Keyword                             |                               |                                |
|-------------------------------------|-------------------------------|--------------------------------|
| tandimplantaten turkije             | tandimplantaten turkije prijs | tandarts turkije               |
| tandklinik turkije                  | tandarts istanbul             | tandklinik istanbul            |
| tandimplantaten istanbul            | all on 4 turkije              | all on 4 turkije prijs         |
| facings turkije                     | facings turkije prijs         | tandkronen turkije             |
| tandheelkundige behandeling turkije | tandarts turkije ervaringen   | betrouwbare tandklinik turkije |

Germany Turkish-speaking campaign: because MediDent has first-party evidence of substantial demand from Turkish-speaking people living in Germany, keep a separate Germany + Turkish Search campaign and Turkish landing page. Treat the segment as an international audience physically located in Germany; confirm all location/language/ad-policy settings before launch.

## 8. Secondary markets - keyword seed sets

### Austria / DE

| Keyword                          | Keyword                      |
|----------------------------------|------------------------------|
| zahnimplantate türkei österreich | zahnklinik türkei österreich |
| zahnarzt türkei österreich       | zahnimplantat türkei kosten  |
| zahnarzt istanbul deutsch        | zahnklinik istanbul deutsch  |
| zähne türkei kosten              | zahnbehandlung türkei        |

### Switzerland / DE-FR

| Keyword                          | Keyword                              |
|----------------------------------|--------------------------------------|
| zahnimplantate türkei schweiz    | zahnklinik türkei schweiz            |
| zahnarzt istanbul schweiz        | implant dentaire turquie suisse      |
| clinique dentaire turquie suisse | zahnimplantate türkei kosten schweiz |
| zahnklinik istanbul deutsch      | clinique dentaire istanbul francais  |

### Belgium / FR-NL

| Keyword                           | Keyword                            |
|-----------------------------------|------------------------------------|
| implant dentaire turquie belgique | clinique dentaire turquie belgique |
| tandimplantaten turkije belgie    | tandklinik turkije belgie          |
| dentiste turquie belgique         | tandarts turkije belgisch          |
| implant turquie prix belgique     | tandimplantaten turkije prijs      |

### Ireland / EN

| Keyword                           | Keyword                             |
|-----------------------------------|-------------------------------------|
| dental implants turkey ireland    | dental implants turkey cost ireland |
| dentist turkey ireland            | dental clinic istanbul ireland      |
| full mouth dental implants turkey | all on 4 turkey ireland             |
| veneers turkey ireland            | dental tourism turkey ireland       |

### USA / EN

| Keyword                               | Keyword                         |
|---------------------------------------|---------------------------------|
| dental implants turkey usa            | dental implants turkey cost usa |
| dental clinic turkey for americans    | dentist istanbul americans      |
| full mouth dental implants turkey usa | all on 4 turkey cost usa        |
| veneers turkey usa                    | dental tourism turkey usa       |

### Australia / EN

| Keyword                                     | Keyword                               |
|---------------------------------------------|---------------------------------------|
| dental implants turkey australia            | dental implants turkey cost australia |
| dentist turkey australia                    | dental clinic istanbul australia      |
| full mouth dental implants turkey australia | all on 4 turkey australia             |
| veneers turkey australia                    | dental tourism turkey australia       |

### Sweden / SV

| Keyword | Keyword |
|---------|---------|
|---------|---------|

|                        |                            |
|------------------------|----------------------------|
| tandimplantat turkiet  | tandimplantat turkiet pris |
| tandläkare turkiet     | tandklinik istanbul        |
| tandimplantat istanbul | tandläkare istanbul        |
| tänder turkiet         | tandbehandling turkiet     |

## Norway / NO

| Keyword                | Keyword                   |
|------------------------|---------------------------|
| tannimplantat tyrkia   | tannimplantat tyrkia pris |
| tannlege tyrkia        | tannklinikk istanbul      |
| tannimplantat istanbul | tannlege istanbul         |
| tenner tyrkia          | tannbehandling tyrkia     |

## Denmark / DA

| Keyword                | Keyword                    |
|------------------------|----------------------------|
| tandimplantat tyrkiet  | tandimplantat tyrkiet pris |
| tandlaege tyrkiet      | tandklinik istanbul        |
| tandimplantat istanbul | tandlaege istanbul         |
| taender tyrkiet        | tandbehandling tyrkiet     |

## 9. Recommended Google Ads account structure

### UK\_EN\_Search

- Brand
- Implants
- All-on-4 / Full-mouth
- Veneers / Crowns

### DE\_DE\_Search

- Brand
- Zahnimplantate
- All-on-4 / Zahnersatz
- Veneers / Kronen

### FR\_FR\_Search

- Brand
- Implants
- All-on-4 / Reconstruction
- Facettes / Couronnes

### NL\_NL\_Search

- Brand
- Implantaten
- All-on-4 / Volledige behandeling
- Facings / Kronen

## Campaign rules

- Keep country + language together whenever budget allows. This keeps ad copy, landing page, currency and sales follow-up aligned.
- Do not send all traffic to the homepage. The keyword, ad and landing page must express the same treatment and patient intent.
- Use separate brand campaigns so the brand is measurable without contaminating non-brand performance.
- For new accounts, prioritize exact and phrase match for the high-intent seed list. Expand carefully only after search-term and conversion data justify it. Google confirms that broad match can reach additional related searches beyond phrase/exact.
- Use a search-term review process at least weekly during launch: add relevant winners, add negative terms, improve ads/landing pages where intent is mismatched.

## 10. Negative keyword starter list

Do not apply every negative globally without checking the market. Some terms may be legitimate for certain treatments. Start with clearly irrelevant intent and expand from actual search terms.

| Negative        | Negative              | Negative                | Negative        |
|-----------------|-----------------------|-------------------------|-----------------|
| job             | jobs                  | career                  | salary          |
| course          | courses               | training                | school          |
| university      | degree                | textbook                | pdf             |
| dental software | dental equipment      | dental supplies         | wholesale       |
| laboratory jobs | dental technician job | how to become a dentist | dentist salary  |
| free course     | NHS                   | NHS dentist             | NHS implants    |
| insurance       | dental insurance      | emergency dentist       | walk in dentist |

### Important exclusions by market

- UK: consider NHS-related terms negative if MediDent does not serve NHS demand.
- All markets: do not assume "cheap" should always be negative. It can be part of the buying intent for dental tourism; decide based on brand positioning and conversion quality.
- Do not exclude "price", "cost", "reviews", "experience" or destination terms because these are often commercially useful in health tourism.

## 11. Landing-page mapping

| Ad group          | Landing page should answer                                     | Required local signal                        |
|-------------------|----------------------------------------------------------------|----------------------------------------------|
| EN Implants       | Treatment, visits, pricing method, clinical assessment, travel | English + UK/other country journey           |
| DE Implants       | Zahnimplantate, Kostenlogik, Ablauf, Nachsorge                 | German + Germany/Swiss/Austria patient path  |
| FR Implants       | Implants, prix structure, process, aftercare                   | French + France/Belgium/Swiss where relevant |
| NL Implants       | Implantaten, prijs structure, process                          | Dutch + Netherlands/Belgium path             |
| All-on-4          | What All-on-4 means, candidacy, visits, price method, risks    | Treatment-specific                           |
| Veneers / crowns  | Material, suitability, number of teeth, process, aftercare     | Treatment-specific                           |
| Provider / clinic | Who operates, where, who treats, official identity             | Clinic + doctor evidence                     |

### Above-the-fold recommendation

H1: Dental Implants in Turkey for International Patients

Direct answer: concise, factual treatment summary

At-a-glance: Location | Languages | Visits | Duration | Price method | Aftercare

Primary CTA: Request a treatment assessment

Secondary: View doctors / View patient cases

## 12. Measurement and CRM feedback loop

For MediDent, the real optimization target is not "lead". It is qualified international patient demand and ultimately booked/paid treatment. Google supports offline conversion imports and enhanced conversions for leads; GCLID should be preserved wherever possible.

| Event                   | Measure                 | Optimization use                                             |
|-------------------------|-------------------------|--------------------------------------------------------------|
| Landing page view       | Session / engaged visit | Diagnostic only                                              |
| WhatsApp click          | Micro conversion        | Useful, but not final quality                                |
| Qualified lead          | CRM stage               | Primary Search optimization target once volume is sufficient |
| Treatment plan accepted | CRM stage               | Higher-fidelity commercial signal                            |
| Booked / arrived        | Offline conversion      | Best quality signal for longer-term optimization             |

- Use GCLID and/or enhanced conversions for leads according to the current Google Ads setup.
- Keep health information out of ad-platform conversion labels and event payloads. For the optimization loop, the CRM can store clinical details internally while Google receives only the minimum data needed for attribution and commercial stage measurement.
- Because the user journey can take days or weeks, offline qualified/converted lead feedback is more useful than optimizing only to form submissions.

## 13. AI visibility monitoring

AI visibility should be monitored as a separate channel from classic organic traffic. Google rolled out generative-AI performance reporting in Search Console in 2026, while Bing Webmaster Tools has an AI Performance report showing cited pages, citation trends and grounding queries across Microsoft Copilot and related experiences.

| Metric                  | What to record                                                                      |
|-------------------------|-------------------------------------------------------------------------------------|
| AI prompt coverage      | How many target prompts have a clear supporting page?                               |
| Citation-ready passages | Does a page contain concise factual statements an AI system can quote or summarize? |
| Cited URL               | Which MediDent URL appears in AI answers?                                           |
| Grounding query         | Which natural-language query is associated with the citation?                       |
| Country/language gap    | Which markets or languages lack evidence-rich pages?                                |
| Freshness               | When was price/process/doctor information last reviewed?                            |

### ChatGPT discoverability check

- OpenAI states that public websites can appear in ChatGPT search and recommends not blocking OAI-SearchBot when you want content to be included in summaries/snippets.
- OpenAI also says referral traffic from ChatGPT can be tracked using the `utm_source=chatgpt.com` parameter.

robots.txt baseline check:

User-agent: OAI-SearchBot

Allow: /

## 14. Compliance - critical before Google Ads launch

This section is a practical checklist, not legal advice. The campaign and website should be reviewed against the latest Turkish health-tourism rules and Google Ads policies before launch.

| Area                                   | Current rule / implication                                                                                                                                                                                                                                    |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Türkiye - international health tourism | The 12 Nov 2025 regulation allows sponsored promotion for international health tourism in non-Turkish official languages through a separate overseas-facing social platform or website, subject to the stated conditions.                                     |
| Domestic targeting                     | The same regulation prohibits promotion aimed at generating demand among people living in Türkiye and requires domestic audiences not to be selected on social platforms; automatic audience definitions must be disabled.                                    |
| HealthTürkiye                          | The regulation states that the HealthTürkiye logo must be used across international health-tourism promotional channels for eligible facilities.                                                                                                              |
| Intermediary model                     | An intermediary must not create the impression that it is itself the healthcare facility and should state that the health service is provided by the contracted health facility where applicable.                                                             |
| Pricing / campaigns                    | The regulation specifically permits discounts, campaigns and competitive price announcements in the international-health-tourism context under Article 8(3), within the broader rules.                                                                        |
| Google Ads health policy               | Google applies healthcare-advertising rules and expects legal/industry compliance. Certain healthcare categories are restricted or certification-dependent.                                                                                                   |
| Personalized advertising               | Google treats certain health content as a sensitive interest category and does not support advertiser-selected audience targeting such as Customer Match / advertiser-provided segments for those sensitive categories; location targeting remains supported. |
| Search targeting                       | Keyword-driven Search plus precise geographic targeting is the safer starting architecture for this use case than building the campaign around sensitive user lists.                                                                                          |
| Country + language                     | Use overseas country targeting and the matching language landing page. Do not allow a setup that accidentally targets Turkish domestic demand.                                                                                                                |

## 15. Public keyword evidence and limitations

The following evidence is useful for prioritization but should not be treated as a substitute for a Google Ads Keyword Planner export.

| Source / market                        | Observed public evidence                                                                                                                                                                                                                                                          | How to use it                                                                               |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| Germany - Performance Suite            | "zahnimplantat kosten türkei" shown at 880 monthly searches and about EUR 2.75 CPC; the database states DE country / DE language and was updated 17 Aug 2026.                                                                                                                     | Directional only; validate in Google Ads.                                                   |
| UK / English - third-party 2026 guides | Third-party sources repeatedly identify queries such as "dental implants Turkey cost", "veneers Turkey", "all on 4 Turkey cost" and "Hollywood smile Turkey" as commercial-intent terms.                                                                                          | Use as seed themes, not as verified volume/CPC.                                             |
| Global dental-tourism research         | A 2024-2025 global scan cited terms including "turkey dental", "turkish dentist", "implants turkey", "veneers turkey", "turkey dental implants", "turkish veneers" and "dentist turkey"; highest volumes were reported in markets including the UK, Australia, Canada and the US. | Useful for international market prioritization, but not a current Google Ads volume report. |

### Exact data request for launch:

For each campaign, export Keyword Planner with country, language, device and date range configured. Record average monthly searches, competition, top-of-page bid ranges, forecasts, and search-term performance after launch. Replace any third-party benchmark in this document with account-specific data.

## 16. 30-day launch workflow for Cursor + SEO + Google Ads

1. Create the approved entity dataset: MediDent, clinic, doctors, treatments, languages, locations, materials, pricing logic, travel support, aftercare, official URLs and evidence sources.
2. Build the 4 core country/language landing groups first: UK/EN, Germany/DE, France/FR, Netherlands/NL.
3. Create the treatment hubs: implants, All-on-4/full-mouth, veneers/crowns.
4. Create doctor/clinic evidence pages and at least a small number of real patient cases with documented consent.
5. Implement internal links and structured data matching visible content; validate canonical, hreflang, sitemap and indexability.
6. Implement OAI-SearchBot access check and monitor Google Search Console generative-AI reporting and Bing AI Performance where available.
7. Launch Search campaigns country-by-country, separated by language and treatment intent. Start with high-intent exact/phrase seeds.
8. Run weekly search-term reviews and negative-keyword expansion.
9. Connect GCLID/UTMs to CRM and import qualified/converted lead stages back into Google Ads when the setup has enough reliable volume.
10. Use real campaign data to update the keyword matrix. Feed winning search terms back into SEO intent clusters and page improvements.

## 17. Final checklist for the Cursor automation

| Check           | Pass condition                                                                              |
|-----------------|---------------------------------------------------------------------------------------------|
| Intent          | The page answers one clear user problem.                                                    |
| Evidence        | Every important fact is verified or explicitly marked as unavailable.                       |
| Medical safety  | No invented diagnosis, outcome, guarantee or credential.                                    |
| Entity          | MediDent/clinic/doctor/treatment naming is consistent.                                      |
| Country         | Country-specific page contains real local patient journey information.                      |
| Language        | Native-quality language and consistent terminology.                                         |
| Structure       | H1/H2/FAQ/table/direct-answer structure is clear.                                           |
| Internal links  | Page connects to relevant treatment, doctor, clinic, case and travel pages.                 |
| Schema          | Markup matches visible content.                                                             |
| Indexing        | Canonical, robots, sitemap, hreflang and technical eligibility are checked.                 |
| Ads landing fit | Keyword -> ad -> landing page are aligned.                                                  |
| Compliance      | International promotion rules and Google Ads policies checked before publish/launch.        |
| Measurement     | Form/WhatsApp/call + CRM stage can be traced to campaign where technically feasible.        |
| AI regression   | Target prompt set has a clear supporting URL and factual answer.                            |
| Freshness       | Prices, doctors, clinic details and operational claims show a review date when appropriate. |
